PRE-FLIGHT CHECK

**Zero Trust is not a product,
it's a security model built on**

Assume breach

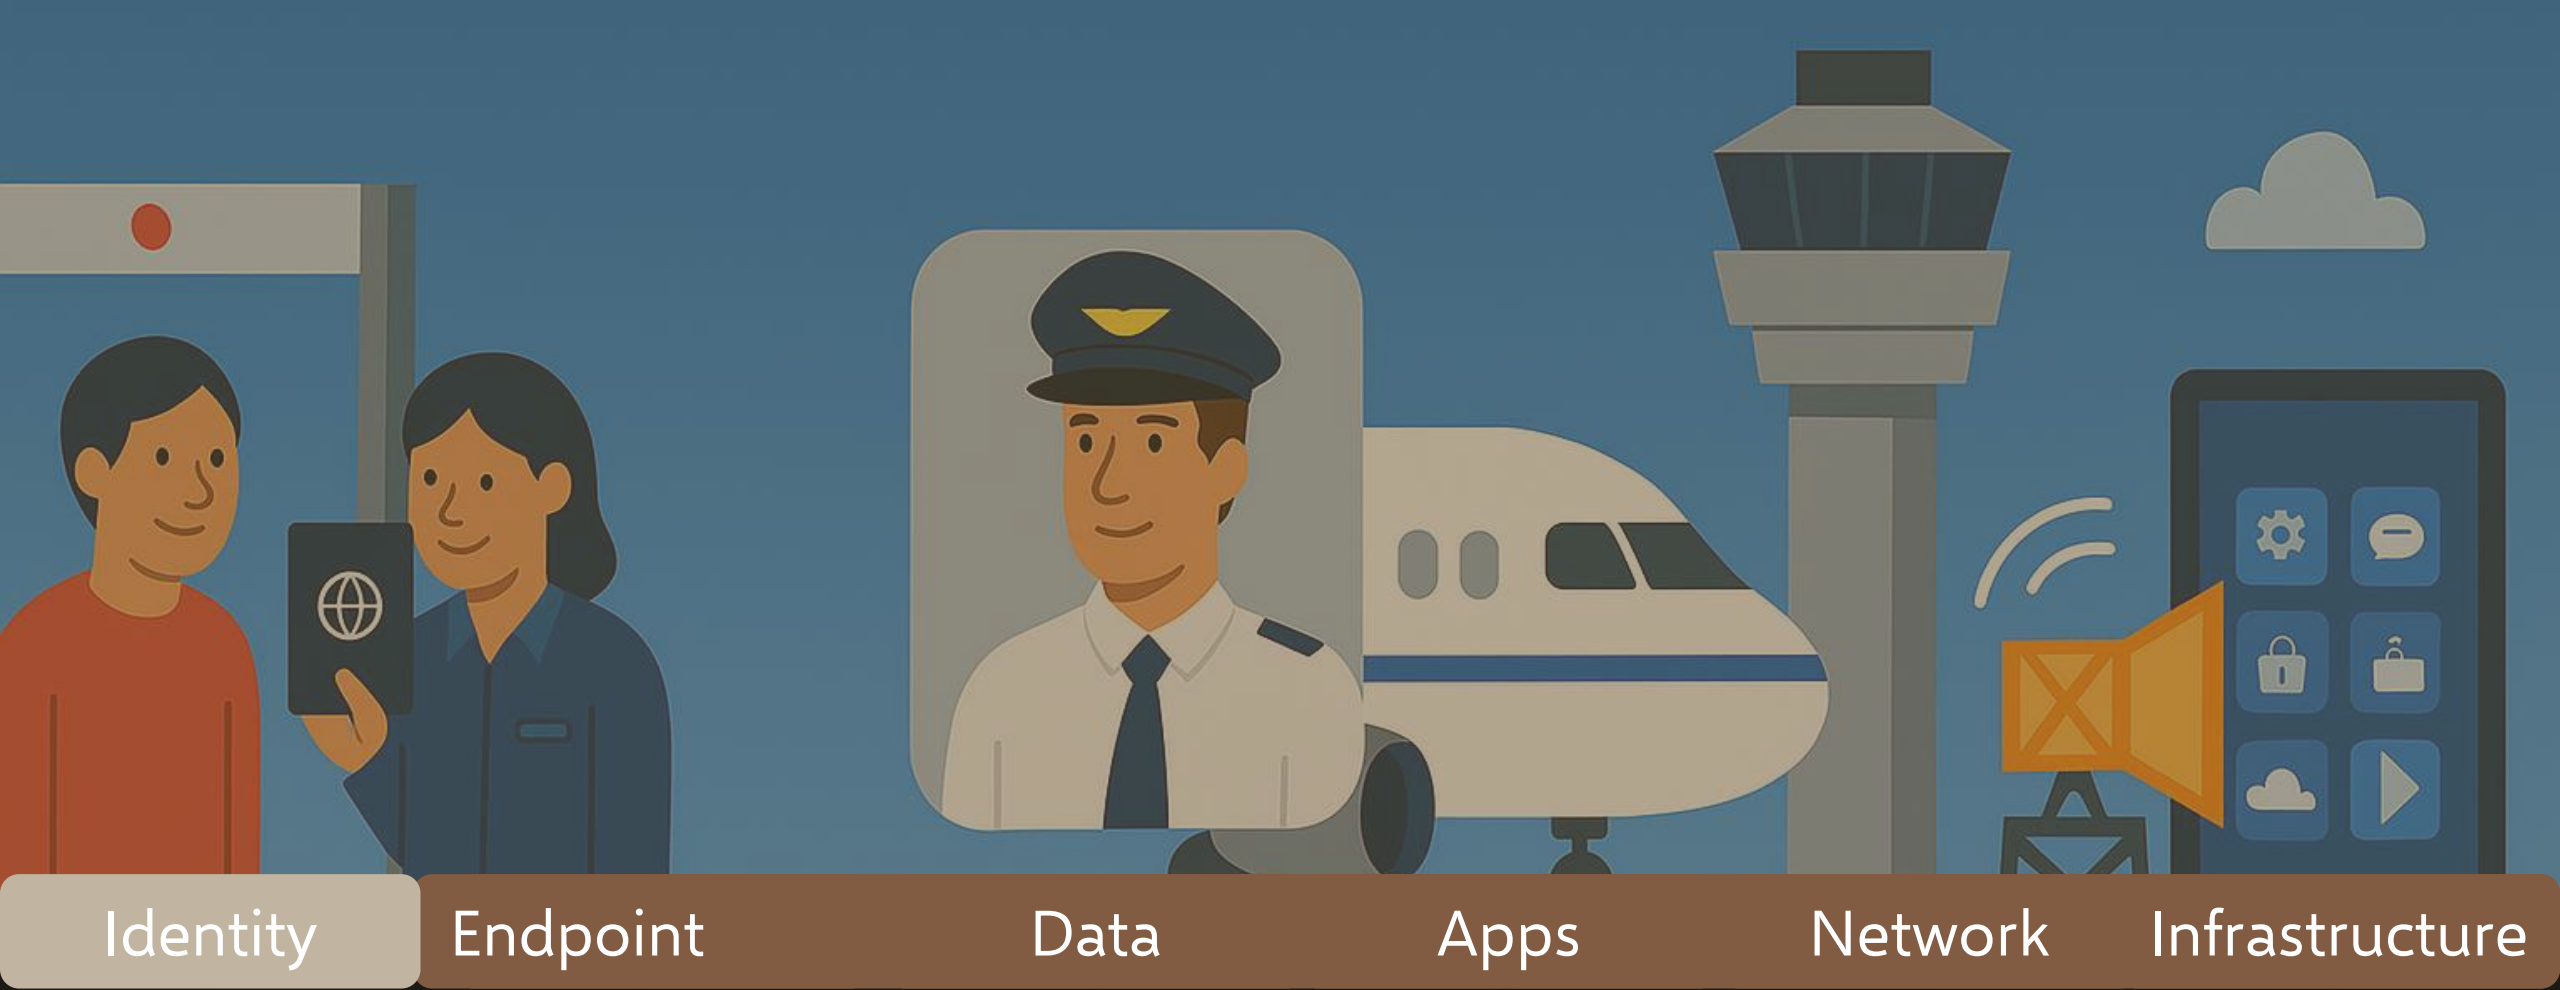

Verify explicitly

Least privilege

SHOW ME YOUR PASSPORT

**ZERO TRUST IS NOT ABOUT
LOCKING EVERYTHING
DOWN, IT'S ABOUT
MAKING SMARTER,
MORE CONTEXT-AWARE
DECISIONS ABOUT WHO
GETS ACCESS, AND WHEN.**

WHO OWNS DEFENDER XDR?

Primary security roles

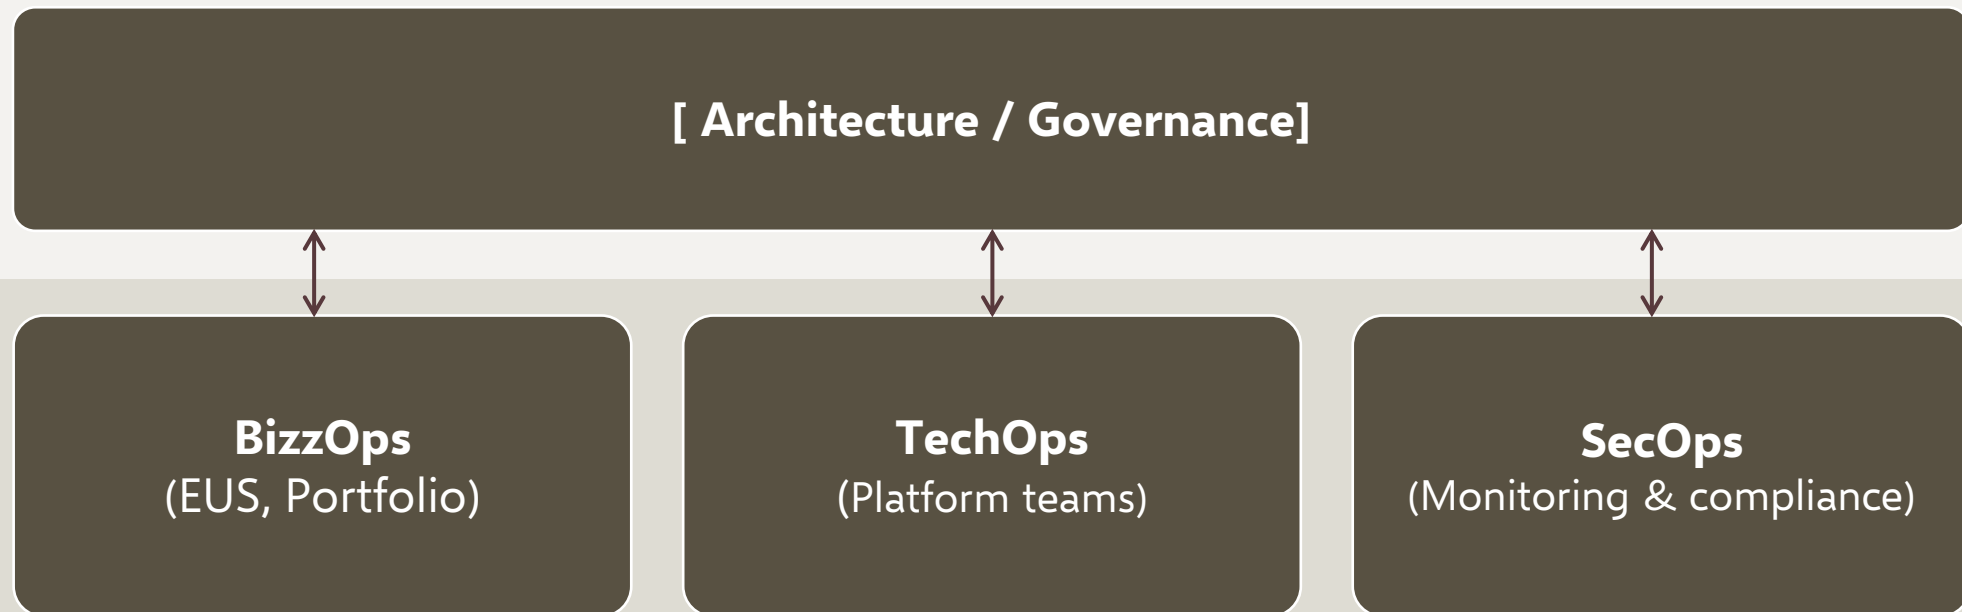

- Security Administrator
- Security Operator
- Security Reader

Relevant security roles

- Global admin
- Privileged Role Administrator
- Compliance Administrator
- Cloud App Security Administrator
- Identity Governance Administrator
- Authentication administrator
- Conditional Access Administrator
- Directory Readers

LICENSE TO OPERATE

HISTORY

Defender for Endpoint

- Introduced **custom RBAC roles**
Assignment via **user groups**
- **Scoping** enforced through *device groups*

Defender for Office 365

- **Pre-defined roles**, not customizable
- Permissions spread across **two separate control planes**:
 - **EOP** (Exchange Online Protection)
 - **EXO** (Exchange Admin Center)
- Assignments often **directly to users**

Defender for Identity

- **Relying** heavily on **Entra ID roles**
- Still mostly **built-in pre-defined roles**
 - Users or groups assigned to **Defender for Identity role groups**

Defender for Cloud Apps

- **Built-in roles only**
- Assignments **direct to users** in the portal

THE NORTH STAR OF UNIFIED ACCESS

One Security Permissions Model

Unified Admin Experience

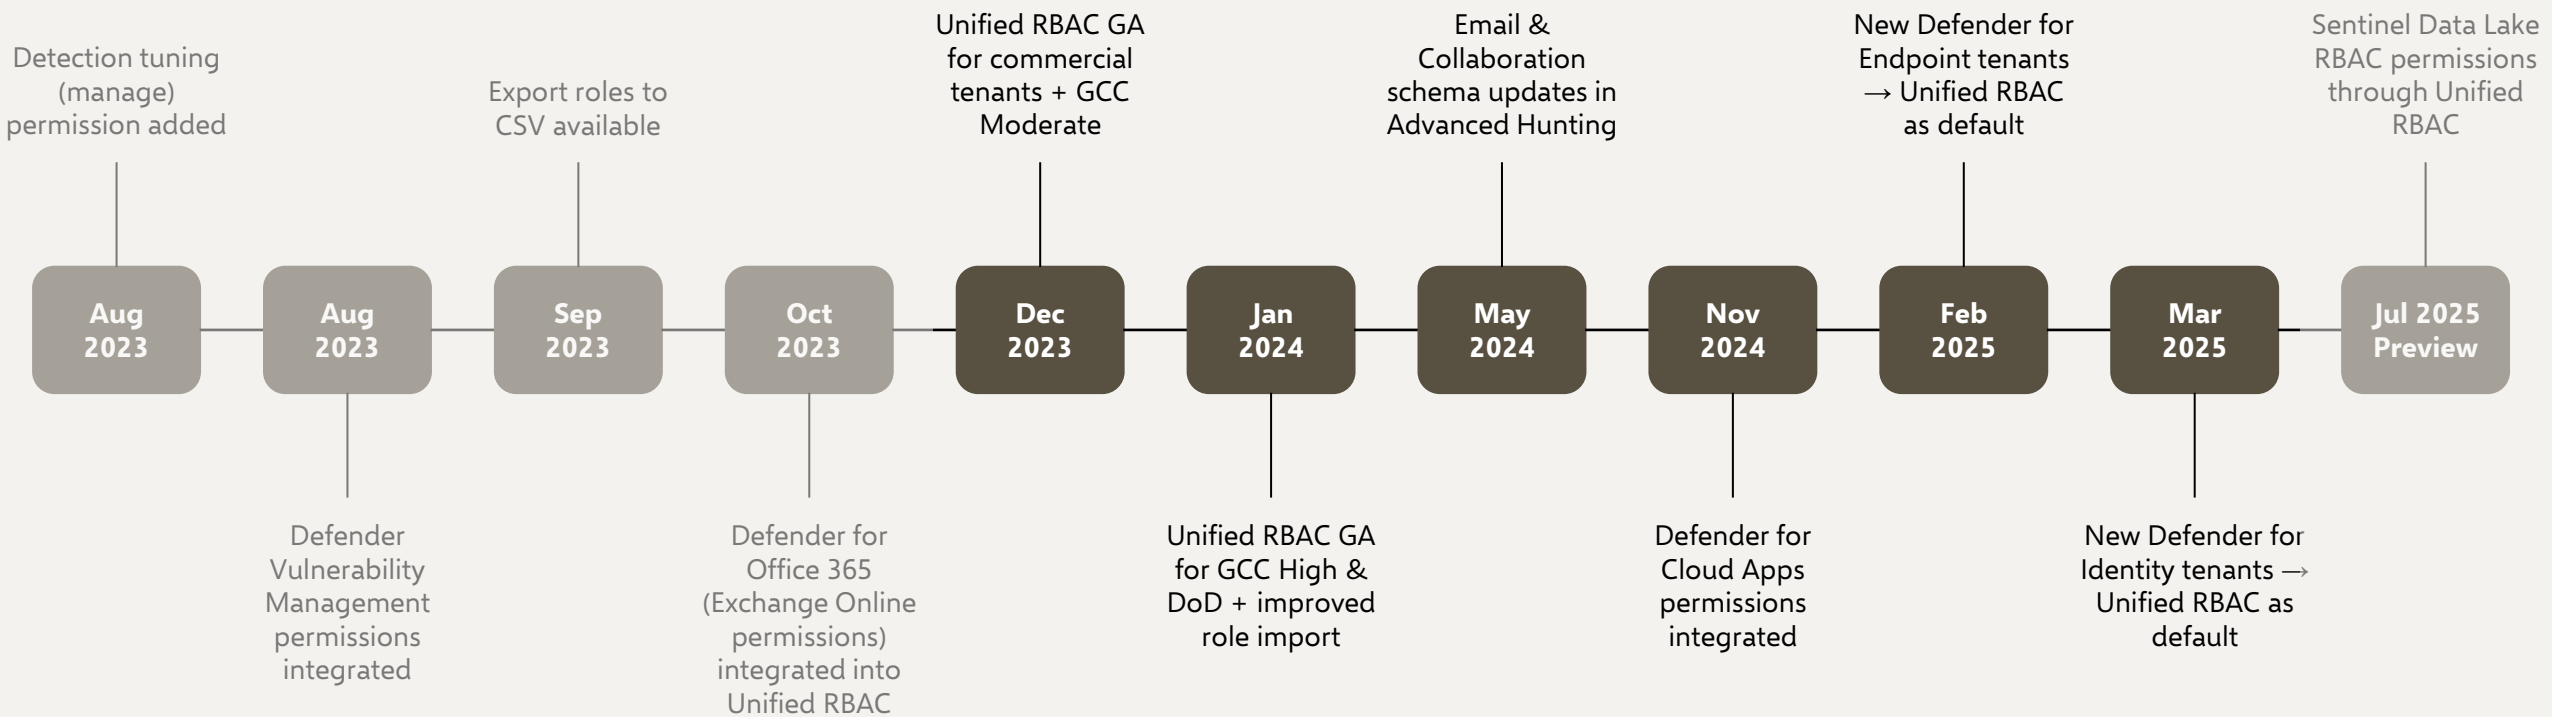

Effortless Transition

Modern Integration

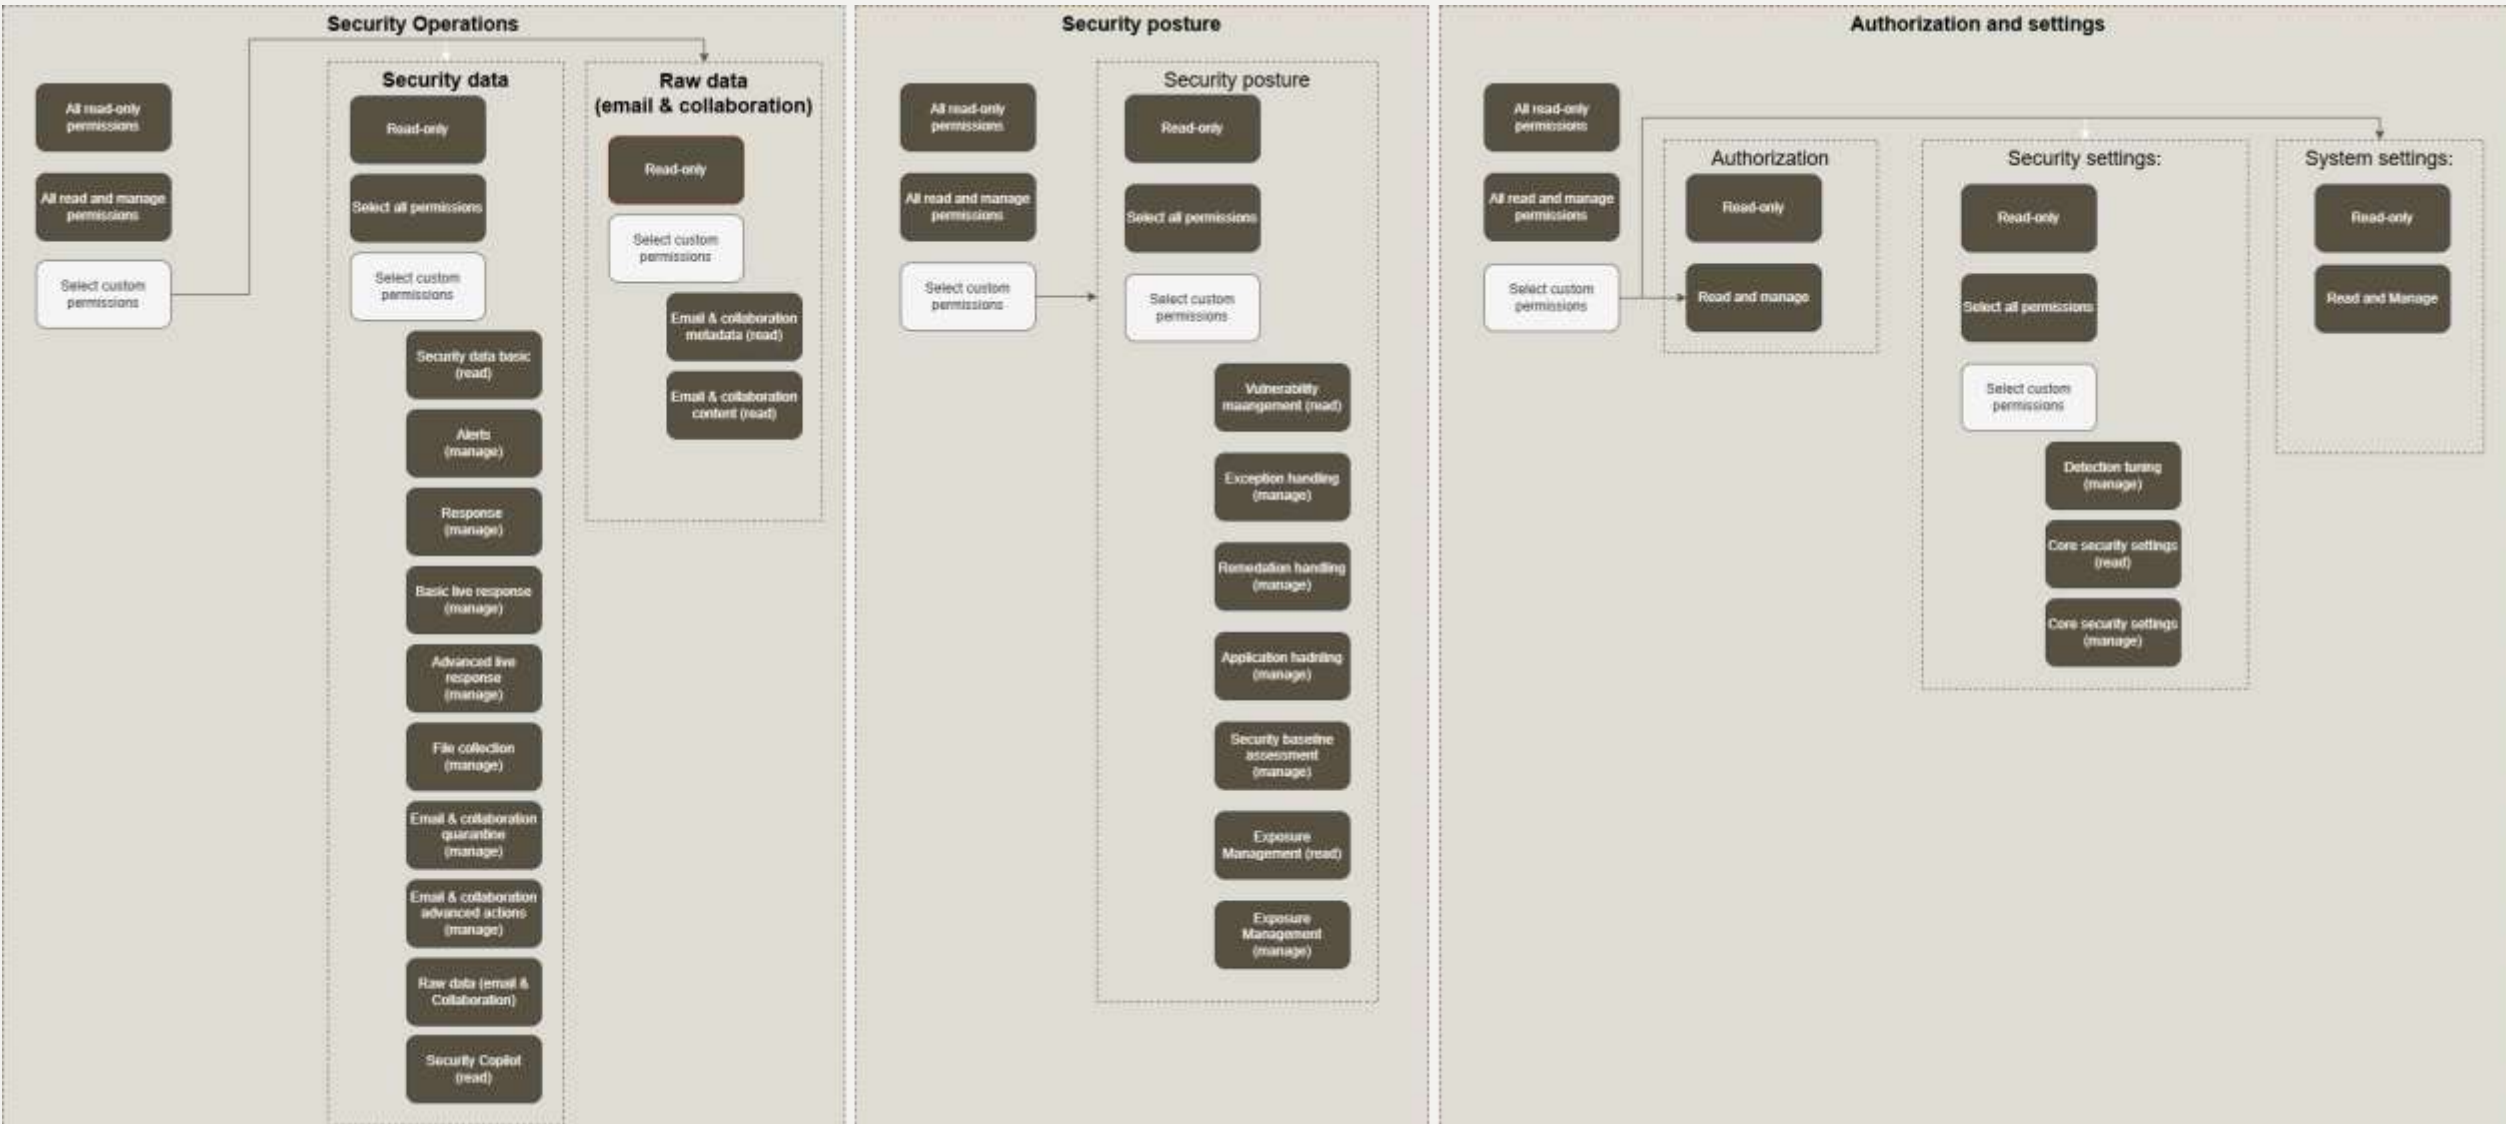

TIMELINE UNIFIED RBAC

"What's new in Microsoft Defender XDR Unified role-based access control (RBAC) - Microsoft Defender XDR | Microsoft Learn"

DEFENDER URBAC MODEL

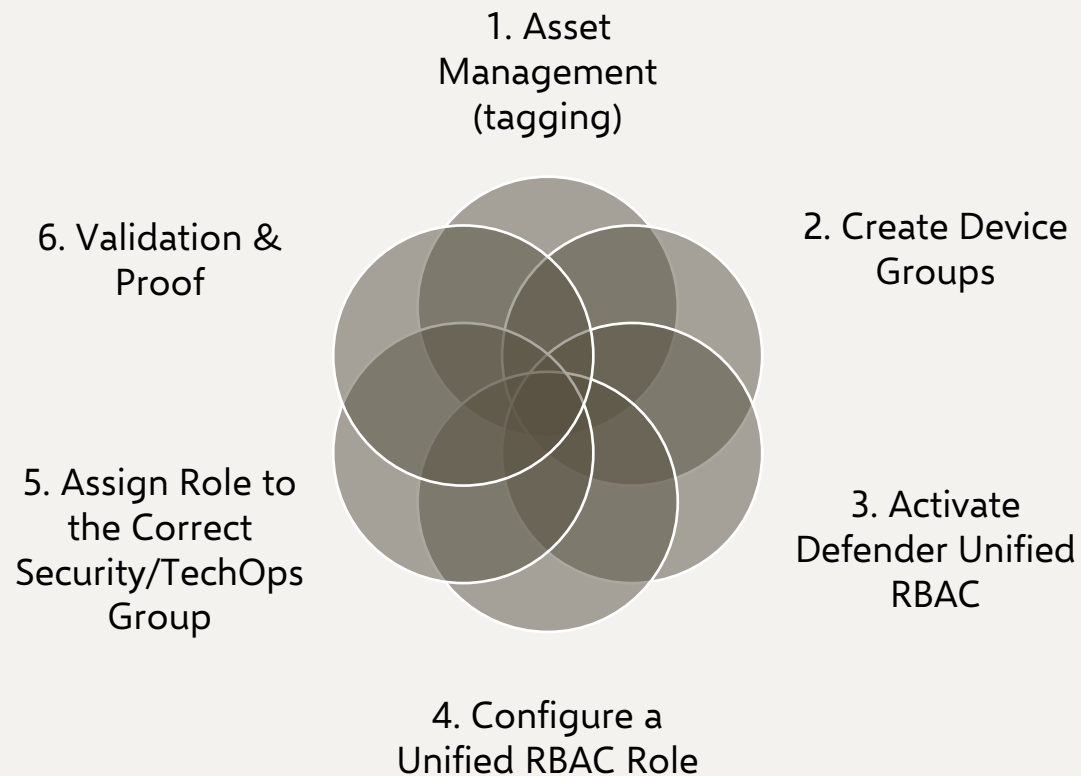

HOW FAR ALONG ARE WE?

DEMO FLOW

UNIFIED RBAC

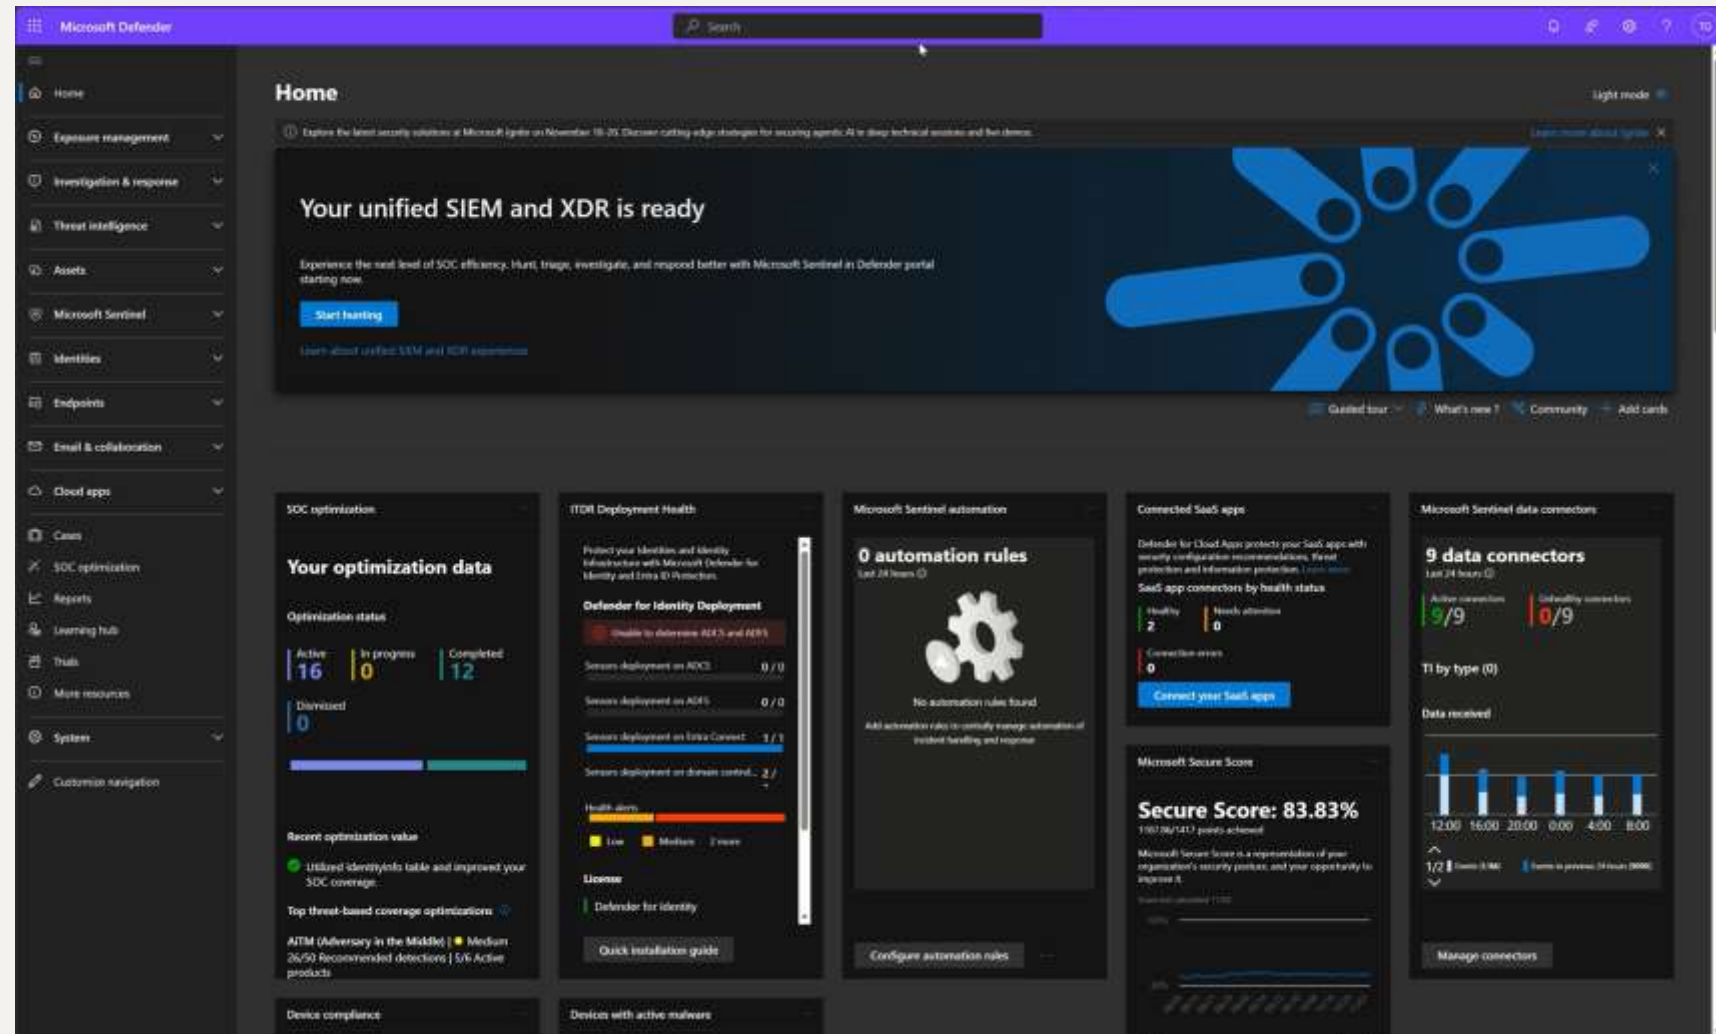

IN ACTION

ASSET MANAGEMENT

1. Tag with intent (1:X)
2. Automate wherever possible
3. Be precise, not generic
4. Validate what's truly in scope
5. Changes take time to propagate
6. Keep your naming convention consistent
Retag when reality changes
7. User Device Discovery 'smart'

Shared Ownership: Who fixes what happens on this device?

DEVICE GROUP(S)

1. Use tag logic wisely
2. Device groups should map 1:1 to business intent
3. Defender Device Groups evaluation isn't instant

The screenshot displays the Microsoft Defender console interface. The left sidebar contains a navigation menu with categories like Home, Exposure management, Investigation & response, Threat intelligence, Assets, Devices, Identities, Applications, Microsoft Sentinel, Identities, Endpoints, Email & collaboration, Cloud apps, Cases, SOC optimization, Reports, Learning hub, Trials, More resources, System, Data management, Permissions, Health, Settings, and Customize navigation. The main content area is titled 'Endpoints' and shows a list of device groups. The 'Device groups' section is highlighted in the left sidebar. The table lists the following device groups:

Rank ↑	Device group	Devices	Remediation level	Description	User groups
Last	Ungrouped devices (default)	1420	Full remediation	Devices that do not belong to a custom group. This ...

- Alert service settings
- Permissions and roles
- Streaming API

Rules

- Asset rule management
- Alert tuning
- Critical asset management
- Service accounts classification

Automated response

- Identities
- Devices

Activate unified role-based access control

When you activate the workloads to use the new permission model, any custom roles that were created or managed previously by your organization will no longer grant access to services and data in Microsoft Defender XDR.

You can't activate workloads that haven't been turned on or deployed. To find out which services still need to be turned on, see Workload settings.

Workloads

Endpoints & Vulnerability Management

Active

Email & Collaboration

Enforcing Exchange Online permissions will impact the Email & Collab capabilities that were previously configured in the Exchange admin center.

Active - Defender for Office 365

Active - Exchange Online permissions

Cloud Apps

Turning on this setting will apply these permissions to Microsoft Defender for Cloud Apps experiences, with the exception of app governance. Note: built in roles such as discovery admin, discovery report admin, app/instance admin and user group admin will no longer be supported once this setting is activated.
